# WHAT WE ARE ABOUT TO ACHIEVE.

- Understand the purpose of the document: Provide a foundation for analyzing, designing, and developing the E-Learning system.
- Clearly understand the system objectives: Enhance proactiveness, support students in reviewing through notes, and motivate them using ranking/badge mechanisms.
- Software development process, UML, MVC architecture, and REST API from the SE2 course.

# **PRESENTATION CONTENT**

**Part I. Introduction.**

**Part II. General Description.**

**Part III. Requirements.**

# PART I. INTRODUCTION.

- Core Features: Account management, content access, lesson-based notes, progress tracking, and gamification.
- Scope: A web application serving the online learning activities of students and lecturers in the IT Faculty.
- The system allows students to take notes directly on each lesson to personalize their learning.

# **PRESENTATION CONTENT**

Part I. Introduction.

**Part II. General Description.**

Part III. Requirements.

# PART II. GENERAL DESCRIPTION.

- Student: The primary learners; can manage personal info, register for courses, submit assignments, view grades, and comment.
- Guest: Users who are not logged in; can register, log in, reset passwords, and view course information.
- Lecturer: Content creators; can create/edit courses, manage students, create assignments, grade, and comment.
- Administrator: Responsible for system operation; manages students, lecturers, news, and comments with the highest access rights.
- Technology: Built on a Web platform using Java (Spring Boot) and MySQL, following the MVC architecture and using standard REST APIs.

# **PRESENTATION CONTENT**

Part I. Introduction.

Part II. General Description.

**Part III. Requirements.**

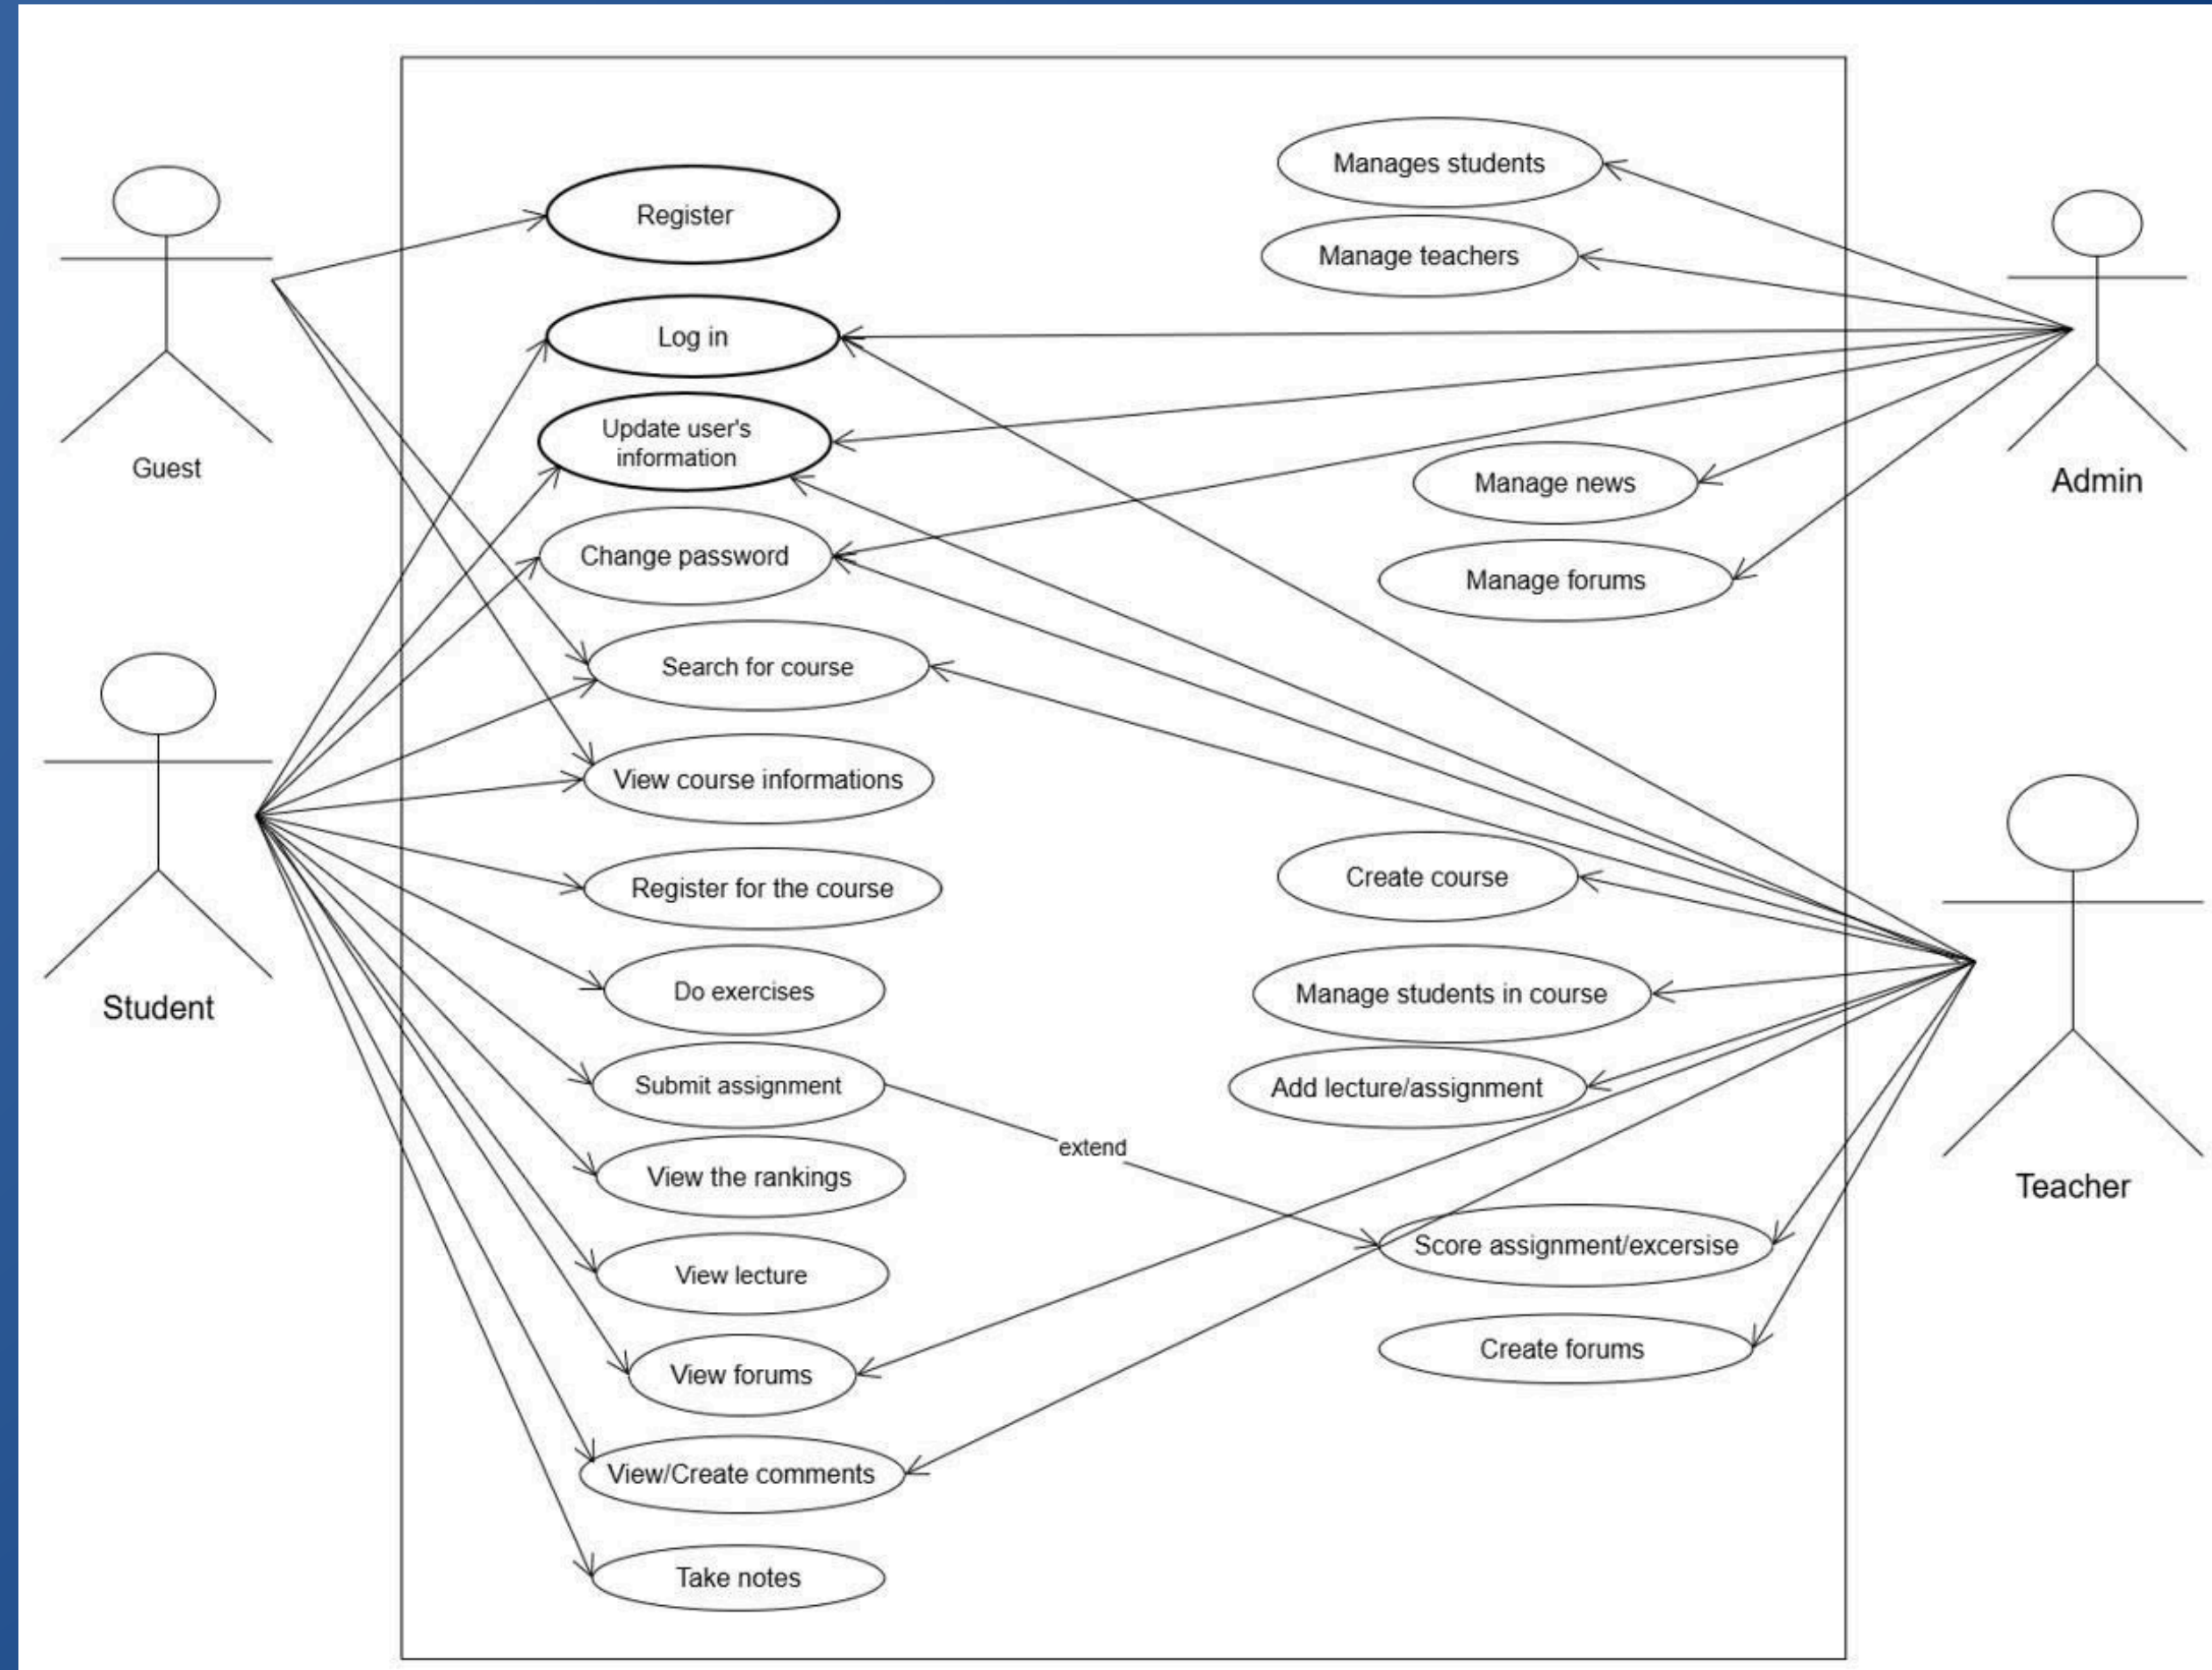

# PART III. FUNCTIONAL & PERFORMANCE REQUIREMENTS.

- Support forum interaction (create new posts, reply to existing posts, or respond to comments).
- Note-taking feature activated by highlighting text.
- Security constraints: Mandatory HTTPS/TLS ( $\geq 1.2$ ), with SSO/JWT used for authentication.
- Performance limits: Response time under 3 seconds under normal loads, supporting a minimum of 100 concurrent users, with 99% availability during business hours.

# GENERAL USE CASE DIAGRAM
